 Given name(s): ALEX
 Address: 2A Unity Drive, Pleasantville
 Date of birth: 01 JAN 1924 Sex: M F I

Pressure Injury Prevention/Management Plan

- Upon completion of Waterlow risk score tick implemented interventions.
- Care outlined in this plan **must** be altered if it is not clinically appropriate for the individual patient.
- Every person documenting on this form must supply a sample of their initials in the signature log (page 4).

Risk category	Plan	Date	Time	Completed by (initials)	Waterlow score
All patients	Use water-based skin emollients to maintain skin hydration				
	Use a pH appropriate skin cleanser and dry skin thoroughly				
	Use transfer aids and employ appropriate manual handling techniques				
	Provide pressure injury information and develop plan of care in partnership with patient/carer				
At risk High risk Very high risk (Waterlow score 10+)	Ensure appropriate positioning and use of appropriate support surfaces: a. mattress (type:)				
	b. seating cushion				
	c. bed cradle				
	d. heel wedge/boot				
	e. other:				
	Increase turning/repositioning schedule to:				
	Increase mobility according to patient condition				
	Conduct daily skin assessment				
	Conduct continence assessment				
	Refer patient to Dietitian (if MST >2)				
Refer patient to Allied Health (if available):					
Other referral:					
Provide nutritional support					
Pressure Injury	Re-categorise Suspected Deep Tissue Injury and Unstageable as soon as possible				
	Document stage, location and description in clinical notes				
	Complete incident report				
	Initiate and document wound management strategies				
Review pressure redistribution support surfaces					

Recommended mattresses according to Waterlow score:

- **At Risk (10+)** Consider high specification reactive (constant low pressure) support foam mattress
- **High Risk (15+)/Very High Risk (20+)** Consider active powered (alternating pressure) support mattress, or speciality bed/mattress system
- Consider Bariatric mattress/bed for patients with BMI >40

Signature Log

Every person documenting in this assessment must supply a sample of their initials in the signature log below

Facility: QUni Retirement Village

Skin Inspection

- Conduct a comprehensive skin inspection as soon as possible following admission within a minimum of **eight (8) hours**.
- Reassess at a minimum of **daily if 'at-risk'; weekly if 'not at-risk'; on transfer; if the patient's condition changes and on discharge**.
- A comprehensive skin inspection should include a head-to-toe (anterior and posterior) assessment for signs of erythema, blanching response, localised heat, oedema, induration and skin breakdown (including observation for any skin damage related to medical devices, plaster casts).
- Every person documenting on this form must supply a sample of their initials in the signature log (page 4).

Initial Comprehensive Skin Inspection on Admission

Admitted	Ward/Unit	Date	Time	Initials
		XX/XX/XX	0800	LR
Skin inspection completed	Ward/Unit	Date	Time	Initials

Pressure Injury present? Yes No
 Wound present? Yes No
 Skin Tear(s) present? Yes No
 Incontinence Associated Dermatitis present? Yes No
 Other skin concerns? Yes No

Record skin related issues on diagram below

If yes to any of the above, ensure management strategies are initiated.

Modified Waterlow Risk Score

- Calculate Risk Score as soon as possible following admission within a minimum of **eight (8) hours**.
- Reassess at a **minimum of weekly (hospital, subacute and rehabilitation) or monthly (residential care); and if the patient's condition changes.**
- Risk scoring should never replace clinical judgement.
- Every person documenting on this form must supply a sample of their initials in the signature log (page 4).

Screening: Does the patient have a history of pressure injury? Yes, site(s): _____ No
