Plastic Waste

Plastic bottle waste is a growing environmental crisis, contributing significantly to landfills and ocean pollution. Each year, billions of plastic bottles are discarded, many of which take hundreds of years to decompose, leaching harmful chemicals into ecosystems and harming wildlife.

Staff, students and community members that visit our campuses and help reduce the impact of plastic waste by opting to use reusable water bottles and using the many water fountains located across our campuses.

The following pages display the locations of drinking fountains at our regional campuses. Our metro campuses also have drinking fountains available for use.

Hydro Solar Systems

Our Rockhampton North campus also features a Hydro Solar drinking fountain which uses solar power to provide fresh and clean drinking water. These fountains not only provide a green alternative for hydration but also enhance awareness of the importance of sustainable resource use.
